DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11 and 21, drawn to a method of making a screen using an automated apparatus, classified in class 700, subclass 245.
- II. Claims 12-23, drawn to a method of making a screen, classified in class 209, subclass 308.

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the method of making a screen using mechanical movement apparatus does not require the use of automated control systems such as robotic welding. The subcombination has separate utility such as method of making a screen with automated control system which would requires less human control.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
